<b>List of Figures</b>	<b>xi</b>
<b>Notation</b>	<b>xiii</b>
<b>Preface</b>	<b>xxi</b>
<b>1 Introduction to the Central Concepts</b>	<b>1</b>
1.1 Aim and History of Discrete Convex Analysis . . . . .	1
1.1.1 Aim . . . . .	1
1.1.2 History . . . . .	5
1.2 Useful Properties of Convex Functions . . . . .	9
1.3 Submodular Functions and Base Polyhedra . . . . .	15
1.3.1 Submodular Functions . . . . .	16
1.3.2 Base Polyhedra . . . . .	18
1.4 Discrete Convex Functions . . . . .	21
1.4.1 L-Convex Functions . . . . .	21
1.4.2 M-Convex Functions . . . . .	25
1.4.3 Conjugacy . . . . .	29
1.4.4 Duality . . . . .	32
1.4.5 Classes of Discrete Convex Functions . . . . .	36
Bibliographical Notes . . . . .	36
<b>2 Convex Functions with Combinatorial Structures</b>	<b>39</b>
2.1 Quadratic Functions . . . . .	39
2.1.1 Convex Quadratic Functions . . . . .	39
2.1.2 Symmetric M-Matrices . . . . .	41
2.1.3 Combinatorial Property of Conjugate Functions . .	47
2.1.4 General Quadratic L-/M-Convex Functions . . . .	51
2.2 Nonlinear Networks . . . . .	52
2.2.1 Real-Valued Flows . . . . .	52
2.2.2 Integer-Valued Flows . . . . .	56
2.2.3 Technical Supplements . . . . .	58
2.3 Substitutes and Complements in Network Flows . . . . .	61
2.3.1 Convexity and Submodularity . . . . .	61

---

2.4	2.3.2      Technical Supplements . . . . .	63
	Matroids . . . . .	68
	2.4.1      From Matrices to Matroids . . . . .	68
	2.4.2      From Polynomial Matrices to Valuated Matroids . . . . .	71
	Bibliographical Notes . . . . .	74
<b>3</b>	<b>Convex Analysis, Linear Programming, and Integrality</b>	<b>75</b>
3.1	Convex Analysis . . . . .	75
3.2	Linear Programming . . . . .	84
3.3	Integrality for a Pair of Integral Polyhedra . . . . .	88
3.4	Integrally Convex Functions . . . . .	90
	Bibliographical Notes . . . . .	97
<b>4</b>	<b>M-convex Sets and Submodular Set Functions</b>	<b>99</b>
4.1	Definition . . . . .	99
4.2	Exchange Axioms . . . . .	100
4.3	Submodular Functions and Base Polyhedra . . . . .	101
4.4	Polyhedral Description of M-Convex Sets . . . . .	106
4.5	Submodular Functions as Discrete Convex Functions . . . . .	109
4.6	M-Convex Sets as Discrete Convex Sets . . . . .	112
4.7	$M^\natural$ -Convex Sets . . . . .	114
4.8	M-Convex Polyhedra . . . . .	116
	Bibliographical Notes . . . . .	117
<b>5</b>	<b>L-convex Sets and Distance Functions</b>	<b>119</b>
5.1	Definition . . . . .	119
5.2	Distance Functions and Associated Polyhedra . . . . .	120
5.3	Polyhedral Description of L-Convex Sets . . . . .	121
5.4	L-Convex Sets as Discrete Convex Sets . . . . .	123
5.5	$L^\natural$ -Convex Sets . . . . .	126
5.6	L-Convex Polyhedra . . . . .	128
	Bibliographical Notes . . . . .	129
<b>6</b>	<b>M-convex Functions</b>	<b>131</b>
6.1	M-Convex Functions and $M^\natural$ -Convex Functions . . . . .	131
6.2	Local Exchange Axiom . . . . .	133
6.3	Examples . . . . .	136
6.4	Basic Operations . . . . .	140
6.5	Supermodularity . . . . .	143
6.6	Descent Directions . . . . .	144
6.7	Minimizers . . . . .	146
6.8	Gross Substitutes Property . . . . .	150
6.9	Proximity Theorem . . . . .	153
6.10	Convex Extension . . . . .	156
6.11	Polyhedral M-Convex Functions . . . . .	158
6.12	Positively Homogeneous M-Convex Functions . . . . .	161

6.13	Directional Derivatives and Subgradients . . . . .	163
6.14	Quasi M-Convex Functions . . . . .	165
	Bibliographical Notes . . . . .	172
<b>7</b>	<b>L-convex Functions</b>	<b>175</b>
7.1	L-Convex Functions and $L^{\frac{1}{2}}$ -Convex Functions . . . . .	175
7.2	Discrete Midpoint Convexity . . . . .	178
7.3	Examples . . . . .	179
7.4	Basic Operations . . . . .	181
7.5	Minimizers . . . . .	183
7.6	Proximity Theorem . . . . .	184
7.7	Convex Extension . . . . .	185
7.8	Polyhedral L-Convex Functions . . . . .	187
7.9	Positively Homogeneous L-Convex Functions . . . . .	191
7.10	Directional Derivatives and Subgradients . . . . .	194
7.11	Quasi L-Convex Functions . . . . .	196
	Bibliographical Notes . . . . .	200
<b>8</b>	<b>Conjugacy and Duality</b>	<b>201</b>
8.1	Conjugacy . . . . .	201
8.1.1	Submodularity under Conjugacy . . . . .	202
8.1.2	Polyhedral M-/L-Convex Functions . . . . .	204
8.1.3	Integral M-/L-Convex Functions . . . . .	208
8.2	Duality . . . . .	212
8.2.1	Separation Theorems . . . . .	212
8.2.2	Fenchel-Type Duality Theorem . . . . .	217
8.2.3	Implications . . . . .	219
8.3	$M_2$ -Convex Functions and $L_2$ -Convex Functions . . . . .	222
8.3.1	$M_2$ -Convex Functions . . . . .	222
8.3.2	$L_2$ -Convex Functions . . . . .	225
8.3.3	Relationship . . . . .	229
8.4	Lagrange Duality for Optimization . . . . .	230
8.4.1	Outline . . . . .	230
8.4.2	General Duality Framework . . . . .	231
8.4.3	Lagrangian Function Based on M-Convexity . . . . .	234
8.4.4	Symmetry in Duality . . . . .	237
	Bibliographical Notes . . . . .	240
<b>9</b>	<b>Network Flows</b>	<b>241</b>
9.1	Minimum Cost Flow and Fenchel Duality . . . . .	241
9.1.1	Minimum Cost Flow Problem . . . . .	241
9.1.2	Feasibility . . . . .	243
9.1.3	Optimality Criteria . . . . .	244
9.1.4	Relationship to Fenchel Duality . . . . .	249
9.2	M-convex Submodular Flow Problem . . . . .	251
9.3	Feasibility of Submodular Flow Problem . . . . .	254

---

9.4	Optimality Criterion by Potentials . . . . .	256
9.5	Optimality Criterion by Negative Cycles . . . . .	259
9.5.1	Negative-Cycle Criterion . . . . .	259
9.5.2	Cycle Cancellation . . . . .	261
9.6	Network Duality . . . . .	264
9.6.1	Transformation by Networks . . . . .	264
9.6.2	Technical Supplements . . . . .	269
	Bibliographical Notes . . . . .	273
<b>10</b>	<b>Algorithms</b>	<b>275</b>
10.1	Minimization of M-Convex Functions . . . . .	275
10.1.1	Steepest Descent Algorithm . . . . .	275
10.1.2	Steepest Descent-Scaling Algorithm . . . . .	277
10.1.3	Domain Reduction Algorithm . . . . .	277
10.1.4	Domain Reduction-Scaling Algorithm . . . . .	280
10.2	Minimization of Submodular Set Functions . . . . .	281
10.2.1	Basic Framework . . . . .	282
10.2.2	Schrijver's Algorithm . . . . .	287
10.2.3	Iwata–Fleischer–Fujishige's Algorithm . . . . .	289
10.3	Minimization of L-Convex Functions . . . . .	298
10.3.1	Steepest Descent Algorithm . . . . .	299
10.3.2	Steepest Descent-Scaling Algorithm . . . . .	301
10.3.3	Reduction to Submodular Function Minimization . . . . .	302
10.4	Algorithms for M-Convex Submodular Flows . . . . .	302
10.4.1	Two-Stage Algorithm . . . . .	303
10.4.2	Successive Shortest Path Algorithm . . . . .	304
10.4.3	Cycle-Cancelling Algorithm . . . . .	306
10.4.4	Primal-Dual Algorithm . . . . .	307
10.4.5	Conjugate Scaling Algorithm . . . . .	312
	Bibliographical Notes . . . . .	315
<b>11</b>	<b>Application to Mathematical Economics</b>	<b>317</b>
11.1	Economic Model with Indivisible Commodities . . . . .	317
11.2	Difficulty with Indivisibility . . . . .	321
11.3	$M^{\frac{1}{2}}$ -Concave Utility Functions . . . . .	324
11.4	Existence of Equilibria . . . . .	328
11.4.1	General Case . . . . .	328
11.4.2	$M^{\frac{1}{2}}$ -Convex Case . . . . .	330
11.5	Computation of Equilibria . . . . .	333
	Bibliographical Notes . . . . .	338
<b>12</b>	<b>Application to Systems Analysis by Mixed Matrices</b>	<b>339</b>
12.1	Two Kinds of Numbers . . . . .	339
12.2	Mixed Matrices and Mixed Polynomial Matrices . . . . .	345
12.3	Rank of Mixed Matrices . . . . .	348
12.4	Degree of Determinant of Mixed Polynomial Matrices . . . . .	351

Bibliographical Notes . . . . .	353
<b>Bibliography</b>	<b>355</b>
